

## A B S T R A C T

5 A method that includes the steps of: feeding the  
strip continuously over a heated support roller (1") with  
a non-deformable metal surface, applying the polymer  
composition P to one face Be of the strip bearing on that  
roller; and heating the strip before, during and after  
application through contact of the other face Bi with  
10 that roller (1"). An associated device for single-face  
or two-face coating. In the case of application between  
two rollers, the other roller (2") has a deformable  
surface. Advantage: improved adhesion of the coating.
